

Lab Cycle 3

CO4: Do Client-side & Server-side scripting

Program # 13

Build a PHP code to store name of students in an array and display it using print_r function. Sort and display the same using asort & arsort functions.

PROGRAM CODE:

```
<?php
$students = array("John", "Alice", "Bob", "Eve", "Charlie");
echo "Original Array:\n";
print_r($students);
asort($students);
echo "\nArray after asort (ascending order):\n";
print_r($students);
arsort($students);
echo "\nArray after arsort (descending order):\n";
print_r($students);
?>
```

OUTPUT

```
Original Array: Array ( [0] => John [1] => Alice [2] => Bob [3] => Eve [4]
=> Charlie ) Array after asort (ascending order): Array ( [1] => Alice [2] =>
Bob [4] => Charlie [3] => Eve [0] => John ) Array after arsort (descending
order): Array ( [0] => John [3] => Eve [4] => Charlie [2] => Bob [1] =>
Alice )
```

Program # 14

Build a PHP code to store name of Indian Cricket players in an array and display the same in HTML table.

PROGRAM CODE:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Indian Cricket Players</title>
  <style>
    table {
      width: 50%;
      border-collapse: collapse;
      margin: 25px 0;
      font-size: 18px;
      text-align: left;
      border: 1px solid black; /* Add this line to create a border around the table */
    }
    th, td {
      padding: 12px;
      border: 1px solid black; /* Add this line to create borders around table cells */
    }
    th {
      background-color: #f2f2f2;
    }
  </style>
</head>
<body>
  <h2>Indian Cricket Players</h2>
  <?php
    $players = array("Virat Kohli", "Rohit Sharma", "Jasprit Bumrah", "Rishabh Pant", "Hardik
    Pandya");

    echo "<table>";
    echo "<tr><th>Player Name</th></tr>";

    foreach ($players as $player) {
      echo "<tr><td>" . $player . "</td></tr>";
    }

    echo "</table>";
  ?>
</body>
</html>
```

OUTPUT

Indian Cricket Players

Player Name
Virat Kohli
Rohit Sharma
Jasprit Bumrah
Rishabh Pant
Hardik Pandya

Program # 15

Design a registration form in HTML, and do necessary server-side validations using PHP.

PROGRAM CODE:

Registration.php

```
<html>
<head>
  <title>Registration Form</title>
</head>
<body>
  <h2>Registration Form</h2>
  <form action="process_registration.php" method="post">
    <label for="name">Name:</label>
    <input type="text" id="name" name="name" required><br><br>

    <label for="email">Email:</label>
    <input type="email" id="email" name="email" required><br><br>

    <label for="password">Password:</label>
    <input type="password" id="password" name="password" required><br><br>

    <input type="submit" value="Register">
  </form>
</body>
</html>
```

Process registration.php

```
<?php
if ($_SERVER["REQUEST_METHOD"] == "POST") {
  $name = trim($_POST['name']);
  $email = trim($_POST['email']);
  $password = trim($_POST['password']);

  if (empty($name)) {
    die("Name is required.");
  }
  if (empty($email) || !filter_var($email,
    FILTER_VALIDATE_EMAIL)) { die("Valid email
    is required.");
  }
  if (empty($password) || strlen($password) < 6) {
```

```
        die("Password is required and should be at least 6  
        characters long."); }  
        echo "Registration successful!";  
    }  
    ?>
```

OUTPUT

Program # 16

Develop a user-friendly electricity bill calculator using PHP, based on the given tariff, collecting consumer data through an input form.

Tariff:

Rate of electricity for 1-100 units: Rs.5/unit

Rate of electricity from 101 units to 200 units: Rs. 7.5/unit

Rate of electricity from 201 units: Rs.10/unit

PROGRAM CODE:

```
<html>
<head>
  <title>Electricity Bill Calculator</title>
</head>
<body>
  <h2>Electricity Bill Calculator</h2>
  <form action="calculate_bill.php" method="post">
    <label for="name">Consumer Name:</label>
    <input type="text" id="name" name="name" required><br><br>

    <label for="units">Units Consumed:</label>
    <input type="number" id="units" name="units" required><br><br>

    <input type="submit" value="Calculate Bill">
  </form>
</body>
</html>
```

Calculate_bill.php

```
<?php
if ($_SERVER["REQUEST_METHOD"] == "POST") {
  $name = trim($_POST['name']);
  $units = (int)trim($_POST['units']);
  $bill = 0;

  $rate1 = 5.00; // For the first 100 units
  $rate2 = 7.50; // For the next 100 units
  $rate3 = 10.00; // For units above 201

  if ($units <= 100) {
    $bill = $units * $rate1;
  } elseif ($units <= 200) {
    $bill = 100 * $rate1 + ($units - 100) * $rate2;
  } else {
```

20MCA133 Web Programming Lab Record

```
$bill = 100 * $rate1 + 200 * $rate2 + ($units - 300) *  
$rate3; }  
  
echo "<h2>Electricity Bill</h2>";  
echo "Consumer Name: " . htmlspecialchars($name) .  
"<br>"; echo "Units Consumed: " .  
htmlspecialchars($units) . "<br>"; echo "Total Bill: ₹" .  
htmlspecialchars($bill);  
}  
?>
```
