

Lab Cycle 4

Co3: Design front end web page and connect to the back-end databases.

Program # 17

Develop a PHP program to connect to a database and retrieve data from a table and show the details

PROGRAM CODE:

```
<?php
$conn=mysqli_connect("localhost","root","","college");
if(!$conn){
die("Connection failed: ". mysqli_connect_error());
}
else
echo "Connected successfully <br>";

if (isset($_POST['submit']))

{

$name = $_POST['name'];

$rollno = $_POST['rollno'];

$age = $_POST['age'];

$course = $_POST['course'];

echo " The values are: ".<br>;

echo "Name: ".$name.<br>;

echo "Roll No: ".$rollno.<br>;

echo "Age: ".$age.<br>;

echo "Course: ".$course.<br>;
```

```
$sql="insert into student2 values('$name',  
'$rollno','$age','$course')"; if (mysqli_query($conn, $sql)) {  
echo "<br>New record created successfully";  
  
} else {  
  
echo "Error: " . $sql . "<br>" . mysqli_error($conn);  
  
}  
}
```

```
if(isset($_POST['search']))  
{  
  
$rollno = $_POST['rollno'];  
  
$sql="select * from student2 where rollno='$rollno';  
  
$res= mysqli_query($conn, $sql);  
  
$totRows = mysqli_num_rows($res);  
  
  
if($totRows==0)  
  
{ echo "No records found!"; }  
  
echo "<center><table><tr>";  
  
echo "<th>Roll No</th><th>Name</th><br><th>Age</th><th>Course</th>"; echo "</tr><tr>";  
while($row = mysqli_fetch_assoc($res))  
{  
  
echo "<td>".$row["rollno"]."</td>";  
  
echo "<td>".$row["name"]."</td>";  
  
echo "<td>".$row["age"]."</td>";  
  
echo "<td>".$row["course"]."</td>";  

```

```
echo "</tr>";
```

```
}
```

```
echo "</table></center>";
```

```
}
```

```
mysqli_close($conn);
```

```
?>
```

```
<html>
```

```
<body>
```

```
<div id="regform">
```

```
<h3> Registration Form</h3>
```

```
<br>
```

```
<form name="studentform" action="studentinput.php" method="post">
```

```
Roll no: <input type="text" name="rollno"> <br>
```

```
Name: <input type="text" name="name"> <br>
```

```
Age: <input type="text" name="age"> <br>
```

```
Course: <input type="text" name="course"> <br>
```

```
<input type="submit" name="submit" value="Submit"
```

```
<br> </form>
```

```
<h4>Search Student Data</h4>
```

```
<form name="searchform" action="studentinput.php" method="post"> Roll no: <input type="text" name="rollno">
```

```
<input type="submit" name="search" value="Search" <br>
```

```
</form>
```

```
</div>
```

```
</body>
```

```
</html>
```

OUTPUT

22	christina	21	mca

Co5:Develop Web Applications**Program # 18**

Develop an application in PHP and MySQL, to accept book details viz. Book id, title, authors, edition and publisher from an HTML form in a web page and save the records in a database and to search for a book using the author name and display the search results.

PROGRAM CODE:

```
<?php
$conn = mysqli_connect("localhost", "root", "", "bookstore");

if (!$conn) {
    die("Connection failed: " . $conn->connect_error);
}
echo "Database connection successfully<br>";

if ($_SERVER['REQUEST_METHOD'] == 'POST') {

    if (empty($_POST['title']) || empty($_POST['authors'])) {
        echo "Title and authors are required fields.<br>";
    } else {

        $title = mysqli_real_escape_string($conn, $_POST['title']);
        $authors = mysqli_real_escape_string($conn, $_POST['authors']);
        $edition = mysqli_real_escape_string($conn, $_POST['edition']);
        $publisher = mysqli_real_escape_string($conn, $_POST['publisher']);

        $sql = "INSERT INTO books (title, authors, edition, publisher) VALUES (?, ?, ?, ?)";
        $stmt = $conn->prepare($sql);
        if ($stmt) {
            $stmt->bind_param("ssss", $title, $authors, $edition, $publisher);

            if ($stmt->execute()) {
                echo "New book added successfully<br>";
            } else {
                echo "Error: " . $stmt->error . "<br>";
            }
        }

        $stmt->close();
    } else {
```

```

echo "Failed to prepare SQL statement: " . $conn->error . "<br>";
}
}
}

if (isset($_GET['author'])) {
    $author = mysqli_real_escape_string($conn, $_GET['author']);
    if (empty($author)) {
        echo "Please enter an author name to search.<br>";
    } else {
        $sql = "SELECT * FROM books WHERE authors LIKE ?";
        $stmt = $conn->prepare($sql);
        if ($stmt) {
            $like_author = "%" . $author . "%";
            $stmt->bind_param("s", $like_author);

            $stmt->execute();
            $result = $stmt->get_result();

            if ($result && $result->num_rows > 0) {
                echo "<table border='1' cellpadding='10'>";
                echo
                "<thead><tr><th>ID</th><th>Title</th><th>Authors</th><th>Edition</th><th>Publisher</th></tr></thead>";
                echo "<tbody>";

                while ($row = $result->fetch_assoc()) {
                    echo "<tr>";
                    echo "<td>" . htmlspecialchars($row["book_id"]) . "</td>";
                    echo "<td>" . htmlspecialchars($row["title"]) . "</td>";
                    echo "<td>" . htmlspecialchars($row["authors"]) . "</td>";
                    echo "<td>" . htmlspecialchars($row["edition"]) . "</td>";
                    echo "<td>" . htmlspecialchars($row["publisher"]) . "</td>";
                    echo "</tr>";
                }

                echo "</tbody>";
                echo "</table>";
            } else {
                echo "No books found by that author.";
            }

            $stmt->close();
        } else {
            echo "Error preparing search query: " . $conn->error . "<br>";
        }
    }
}

```

```
}  
}  
}  
?>
